NOVA SLIDE NS

The NOVA Slide is our Patented bridge mounted baggage slide — used to quickly send late baggage items to the ground level. This promotes speedy turnovers and safe baggage handling like no other equipment available.

Features

- ▶ All Aluminum slide with a powder-coated galvanized steel bed.
- ▶ Lightest, strongest slide ever built.
- ▶ Does not disintegrate due to **Ultra Violet** rays.
- ▶ Meets or exceeds NFPA Class 1 Flame Spread.
- ▶ Ergonomically correct.
- ▶ Approved for use by every PBB mfr.
- ▶ US Patent 6390757

Optional Canopy

The optional canopy is made of flame-retardant reinforced fiberglass. The canopy covers the bottom 12 feet of the slide and provides protection from the elements for baggage accumulated at the base of the slide.

The bottom edge of the canopy is cut away to facilitate easy retrieval of baggage from the end of the slide and to eliminate a “target” for errant airport vehicles.
